Coca Cola Refreshment project profile

Location: San Diego, CA

Building Size: 40'x48'

Square Feet: 1920

Building Use: Logistics Office and Depository

Client Challenges: Coca Cola was in the process of selling a part of their distribution center and relocating staff/drivers to a temporary facility. The drivers were moved to a new drop lot building and required a logistics and deposit office to deposit vending machine monies.

The MBC Solution: MBC worked closely with Cola Cola's architect to "modularize" the proposed floor plan. Once the concept plan was created we focused on the design and flow of the transaction area. This area included bullet proof transaction windows, deal tray with drawer, depository and a night drop off. This customized building was built in 60 days and delivered/installed in 7 days. MBC coordinated all site logistics with the general contractor including; locating utilities, setting building elevations and finalizing the ramp design. The owner successfully moved in and is operating in this successful drop lot office.
