

County of San Diego– Borrego Valley Airport

Modular Building Concepts, Inc.

project profile

Location: Borrego Springs, CA

Building Size: 24'x40'

Square Feet: 960

Building Use: Airport Administration/Pilot Lounge

Client Challenges: The County of San Diego was looking to replace an existing modular building at the Borrego Valley Airport. The existing building had served its purpose but was in poor condition and was determined to be of little value. A new building solution was needed.

The MBC Solution: Modular Building Concepts' solution included a new design and floorplan which was better suited for the administrators and pilots using the facility. Accommodations such as a private pilot lounge, restrooms, break area and general office space were introduced. Upgrades include composite ramp/deck/step, 9' ceiling, textured drywall, triple pane low-e white vinyl windows, storefront doors and upgraded subfloor. Designed, built and installed in 50 days.
