

Temple Adat Shalom

Modular Building
Concepts, Inc.

project profile

Location: Poway, CA

Building Size: 24'x60'

Square Feet: 1,440

Building Use: Pre School/ Daycare

Client Challenges: Temple Adat looked to expand their existing preschool & daycare center to accommodate a growing wait list. Budget constraints and timing were the Temple's biggest challenges when deciding between modular construction and conventional construction.

The MBC Solution: Modular Building Concepts proposed a prefabricated modular building in order to meet their desired timeline to open for the new school year. The Temple required separate facilities for infants and toddlers. MBC preliminarily designed a floor plan and consulted with the customer over several months to finalize the most functional design. Their building was built in 60 days and installed in two weeks. MBC coordinated closely with the customer and their onsite general contractor who performed site improvements and utility connections. The installation had some site challenges so a crane was utilized to position the buildings to protect the existing landscaping & irrigation. This resulted in expediting the installation to meet the customer's timeline. The grand opening was attended by local city council members and was a major milestone for the Temple.
